                           The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to produce the colon cancer-associated Ps, by inserting the nucleic acid into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABP52968
                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 29; 55pp; English

                           The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disporders such as neuronal, glial, astrocytal, hypothalamic and other glandular,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders; and inflammatory, anglogenic and immunologic disorders. The present sequence represents a peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New peptide inhibitors of p50/dynamitin useful for treating cancer by inhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            neck tumours); leukaemias and lymphoid malignancies,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뭉
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ន្តន្តន្ត
                  The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and CC neck tumours); leukaemias and lymphoid malignancies, other disorders such CC as neuronal, glial, astrocytal, hypothalamic and other glandular, as neuronal, glial, astrocytal, hypothalamic and other glandular, CC inflammatory, angiogenic and immunologic disorders. The present sequence cropresents a peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The present invention describes an isolated peptide (I) comprising or the ving at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antinflammatory activities can dean be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention care useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, cas benign or malignant tumours (renal, liver, kidney, bladder, breast, cas benign or malignant seconds, glioblatomas, and various head and carcinomas, such carcinomas, such as neuronal, pleukaemias and lymphoid malignancies, other disorders such neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, can macrophagal, epithelial, stromal and blastocoelic disorders; and confilammatory, angiogenic and immunologic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뭉
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S

CC The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC apeptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatric carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, epithelial, stromal and blastocoelic disorders; and confidential, stromal and blastocoelic disorders; and confidential approaches appeared that can be N-terminally added to (P1)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                          The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblateomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, pepthelial, stromal and blastocoelic disorders; and crepresents a peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cellular proliferation inhibition; cytostatic; antiinflammatory; cancer; p50 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; sarcoma; glioblatoma; leukaemia; lymboid malignancy; neuronal disorder; glial disorder; astrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; angiogenic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New peptide inhibitors of p50/dynamitin useful for treating cancer inhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cellular proliferation inhibitor related peptide

TITLE OF INVENTION: PEPTIDE INHIBITORS OF CELLULAR
TITLE OF INVENTION: PROLIFERATION
FILE REFERENCE: UC669.001A
CURRENT FILING DATE: 2001-02-14
NUMBER OF SEQ ID NOS: 56
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 8
SEQ ID NO 8
SEQ ID NO 8
FEATURE:
ORGANISM: Unknown
FEATURE:
OTHER INFORMATION: A sequence conserved among Homo sapiens and Mus
OTHER INFORMATION: musculus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ; OTHER INFORMATION: A sequence conserved among Homo sapiens and Mus; OTHER INFORMATION: musculus.
